

Edo Sulaiman

Software Engineer | Full-Stack Product Delivery

 edosulai.github.io  edosulai@icloud.com  (+62) 851 67 300 100  edosulaiman  Jakarta, Indonesia

I ship production software in banking and finance — Go services, React/Next, Android — and I use AI coding agents in my day-to-day work. 3+ years: QLola/QCash at Steradian, Kreditplus (ended January 2026), then BRI (BRiSpot/BNS and BRiLink NPSO). The AI work is practical engineering on my own machines, not a claim that I am an ML researcher. Full-stack stays. The agent layer is how I move faster — it does not replace the stack.

EXPERIENCES

Golang Developer @ Bank Rakyat Indonesia (BRiLink), via Indocyber Global Teknologi

April 2026 - Present

Go backend for NPSO catalog and cart on BRiLink Mobile, a live banking ecommerce surface (Brimola / Brigade). Service work on a production BRI agent-banking app. Day-to-day stack: Go, gRPC, PostgreSQL, internal BRI integration layers. Company code stays private.

Golang Developer @ Bank Rakyat Indonesia (BRiSpot / BNS), via Indocyber Global Teknologi

January 2026 - March 2026

Backend microservices for the BRiSpot / BNS ecosystem. Migration from scattered DTOs toward centralized protobuf contracts and shared Kafka event repositories. Service-boundary and integration-pattern alignment across the BNS ecosystem. External integration layers touching CISO, Bristars, EDM, Zoloz, and OIDC paths.

Golang Developer @ PT KB Finansia Multifinance (Kreditplus), via SIGMATECH

July 2025 - January 2026

Finance-domain backend during a SQL Server / MySQL to PostgreSQL migration. Kept APIs backward-compatible while adapting business logic to the PostgreSQL schema. Observability: request tracing, standardized error payloads, and unit-test coverage on service flows. Account, transaction, and insurance-related service work. This role ended in January 2026.

Full-Stack Engineer @ Bank Rakyat Indonesia (QLola Cash Management / QCash), via Steradian Data Optima

May 2023 - July 2025

Frontend-heavy work on enterprise cash-management UI using React, Next.js, TypeScript, Golang, gRPC, and PostgreSQL. Payroll transfer features including mass transfer, multi-currency international transfers, and bulk upload. GnuPG and AES 128/256 for secure payroll file handling. Logging moved from logrus to zap with Fluentbit and Kibana. Microfrontend migration; native SQL in place of GORM.

EDUCATIONS

University of Putra Indonesia YPTK Padang

2018 - 2022 | Bachelor of Computer Science

Major : Informatics Engineering
Minor : Artificial Intelligence | Deep Learning
GPA : 3.6

PROJECTS

BRiLink / NPSO

April 2026 - Present | Microservice, Golang, gRPC, PostgreSQL, Brimola, Brigade

BRiLink Mobile is Bank Rakyat Indonesia's agent-banking app. NPSO is the live ecommerce surface on that app — catalog, cart, and orders — built in Go on Brimola / Brigade.

- ✔ **BRiLink - NPSO E-Commerce Backend**
Built the Go backend for NPSO catalog, cart, and order flows on BRiLink Mobile, a live BRI banking ecommerce surface.
- ✔ **BRiLink - Brimola / Brigade Integration**
Integrated NPSO services through BRI's Brimola architecture on the Brigade layer using gRPC and internal BRI integration contracts.
- ✔ **BRiLink - Agent-Banking Production Services**
Day-to-day Go, gRPC, and PostgreSQL work on the production BRiLink agent-banking app. Company product code stays private.

BRiSpot / BNS

January 2026 - March 2026 | Microservice, Golang, gRPC, Protocol Buffers, Kafka, PostgreSQL, Docker, Bitbucket

BRiSpot / BNS is a mobile banking and backend microservice ecosystem under Bank Rakyat Indonesia. The platform encompasses loan submission, authentication, file management, pipeline orchestration, and external service integration across a multi-repository architecture.

- ✔ **BNS - Centralized Endpoint & Contract Standardization**
Drove the migration from scattered DTOs to centralized protobuf contracts across services. Established bns-event-contracts as a shared Kafka event contract repository, enabling consistent service communication for pipeline, submission, and auth domains.
- ✔ **BNS - Centralized External Service Integration**
Built a centralized client approach for external services including CISO, Bristars, EDM, Zoloz, and OIDC, replacing per-service implementations with a unified integration layer that improved maintainability and reduced duplication across the ecosystem.
- ✔ **BNS - Multi-Repository Service Boundary Alignment**
Shaped cleaner integration patterns across 20+ repositories in the BNS ecosystem, aligning service boundaries and establishing API catalog conventions for consistent cross-service communication.

Kreditplus

July 2025 - January 2026 | Microservice, Golang, RESTful API, PostgreSQL, MySQL, SQL Server, Redis, Swagger, Github, Jenkins, Grafana, Postman

Kreditplus is a leading multi-finance company under KB Kookmin Card, providing consumer and corporate financing solutions such as electronics, automotive, and multipurpose loans. Through its digital ecosystem including Kreditplus Mobile (KPM), Kreditmu, and dealer platform Deasy the company enables seamless credit applications and management. Supported by internal systems like LOS, Marketing Service, and CONFINS, Kreditplus continues to strengthen its digital transformation to deliver efficient and accessible financial services across Indonesia.

- ✔ **Kreditplus - Loan Origination System (Database Migration)**
Migrated the authentication service database from SQL Server and MySQL to PostgreSQL, adapting business logic, SQL queries, and schema relationships for PostgreSQL compatibility. Ensured backward compatibility through consistent API request and response structures with the previous service version, with unit-test coverage on service flows.
- ✔ **Kreditplus - Mobile Error Response Standardization**
Integrated standardized error response payloads across account and transaction services using the platform's shared library. Implemented automated error reporting for server-side failures and enhanced system observability through request tracing and centralized monitoring integration.
- ✔ **Kreditplus - Insurance Allocation Service**
Developed backend services for the insurance allocation product, implementing business logic for premium allocation workflows and integration with existing financial service pipelines. Documented all APIs comprehensively in Confluence.

QLola Cash Management

May 2023 - July 2025 | Microfrontend, Typescript, Next.js, Tailwind CSS, Microservice, Golang, RESTful API, gRPC, PostgreSQL, MongoDB, Redis, RabbitMQ, Protocol Buffers, Swagger, MinIO, Rundeck, Bitbucket, Bamboo, OpenShift Container Platform, Fluent Bit, Kibana, Docker, Konga, Nexus Repository, Nx Repository

QLola Cash Management, developed by Bank Rakyat Indonesia, is a comprehensive solution that helps companies efficiently manage their cash flow. It offers features like payment processing, account monitoring, and financial reporting, helping businesses optimize liquidity and minimize financial risks.

- ✔ **QCash - Transaction & Payment Systems**
Developed enterprise transaction systems supporting Internal Fund Transfer (IFT), RTGS, Clearing, BI-Fast, and multi-currency international transfers. Implemented dedicated multipayment workflows for corporate clients including Pelindo.
- ✔ **QCash - Payroll Transfer Platform**
Engineered a comprehensive payroll transfer platform enabling cross-bank salary disbursements, FTP-based bulk upload with reporting, and a full UI redesign migrated to Micro Frontend (MFE) architecture for improved scalability.
- ✔ **QCash - Encryption & Secure File Handling**
Implemented dual-layer file encryption using GnuPG and AES 128/256 for payroll uploads and reports, ensuring secure data transmission, storage, and regulatory compliance.
- ✔ **QCash - Observability & Performance Optimization**
Migrated logging from logrus to zap with Fluentbit and Kibana integration for centralized monitoring. Optimized data access by replacing GORM with native SQL queries, improving query performance for high-volume transaction processing.
- ✔ **QCash - Authentication Migration**
Migrated the authentication system to a modern architecture, enhancing login security, session management, and access control across the platform.

HIGHLIGHTS

- Go backend for NPSO catalog and cart on a live BRI **BRiLink** ecommerce surface
- Protobuf and Kafka contract work across the **BRiSpot / BNS** ecosystem
- Microfrontend migration with Module Federation on BRI **QLola / QCash**
- Local AI agent workflows: computer-use on macOS, MCP, persistent context — not an ML research claim

SKILLS

Frontend & Mobile

-  Microfrontend (Module Federation)
-  Typescript
-  Next.js
-  React.js (Zustand, React Query)
-  React Native (Expo)
-  Tailwind CSS

Backend & Systems

-  Microservice (RESTful API, gRPC)
-  Golang (Gin, Gomux)
-  Node.js (Express.js)
-  Python (Django)

Databases & Messaging

-  PostgreSQL
-  MySQL
-  SQL Server
-  MongoDB
-  Redis
-  Elasticsearch
-  RabbitMQ

DevOps, Cloud & Tooling

-  Nx Repository
-  Turborepo
-  Swagger
-  Protocol Buffers
-  Firebase
-  Git
-  Github
-  Figma
-  Postman
-  MinIO
-  Rundeck
-  Bitbucket
-  Bamboo
-  Jira
-  Confluence
-  OpenShift Container Platform
-  Amazon Web Services
-  Google Cloud
-  Microsoft Azure
-  Kibana
-  Fluent Bit
-  Docker
-  Kubernetes
-  Kong (Konga)
-  Nexus Repository
-  Jenkins
-  Grafana

AI Coding & Agents

-  Hermes Agent
-  Cursor
-  Paseo
-  OpenClaw
-  Grok bot
-  Claude Code
-  Codex
-  MCP
-  Graphify
-  OmniRoute

Agent Engineering

-  Prompt engineering
-  Context engineering
-  Harness engineering

Languages

-  Indonesia (Native Speaker)
-  English (Working Proficiency)
