

Edo Sulaiman

Full-Stack Engineer | Backend & Frontend Engineer

 edosulai.github.io  edosulai@icloud.com  (+62) 851 67 300 100  edosulaiman  Ragunan, Jakarta

Experienced Full-Stack Engineer with over two years of expertise in developing and optimizing applications using microfrontend and microservices architectures. Passionate about building scalable and high-performance applications, with a strong background in secure payment processing, distributed systems, and cloud infrastructure. Skilled in API optimization and integrating diverse technologies to enhance both application performance and user experience.

EXPERIENCES

Golang Developer @ PT KB Finansial Multifinance (Kreditplus)

July 2025 - Now | Contract

As a Golang Developer at PT KB Finansia Multifinance (Kreditplus), I contribute to the Migration System Project, focusing on backend development, system optimization, and seamless data migration processes.

Golang Developer @ SIGMATECH

July 2025 - Now | Contract

As one of the Golang Developers for the Migration System Project at PT KB Finansia Multifinance (Kreditplus)

Full-Stack Engineer @ Bank Rakyat Indonesia

May 2023 - July 2025 | Contract

As an IT Consultant and Full-Stack Engineer at Bank Rakyat Indonesia (BRI), working under Steradian Data Optima, I specialize in the development and improvement of the QCash platform, contributing to various projects that simplify financial transactions and payment systems.

Full-Stack Developer @ Steradian Data Optima

May 2023 - July 2025 | Full-Time

As one of the Full-Stack Engineers for the QLola Cash Management (QCash) project at Bank Rakyat Indonesia.

EDUCATIONS

University of Putra Indonesia YPTK Padang

2018 - 2022 | Bachelor of Computer Science

Major : Informatics Engineering

Minor : Artificial Intelligence | Deep Learning

GPA : 3.6

PROJECTS

Kreditplus

July 2025 - Now | Microservice, Golang, RESTful API, PostgreSQL, MySQL, SQL Server, Redis, Swagger, Github, Jenkins, Grafana, Postman

Kreditplus is a leading multi-finance company under KB Kookmin Card, providing consumer and corporate financing solutions such as electronics, automotive, and multipurpose loans. Through its digital ecosystem including Kreditplus Mobile (KPM), Kreditmu, and dealer platform Deasy the company enables seamless credit applications and management. Supported by internal systems like LOS, Marketing Service, and CONFINS, Kreditplus continues to strengthen its digital transformation to deliver efficient and accessible financial services across Indonesia.

✔ **Kreditplus - Loan Origination System (Database Migration)**
Migrated the authentication service database from SQL Server and MySQL to PostgreSQL, while collaboratively developing a new microservice with the team under the supervision of the lead engineer. The migration required adapting business logic and SQL queries due to schema and relational model differences in PostgreSQL. Ensured backward compatibility by maintaining consistent API request and response structures with the previous service version. Integrated request tracing support through platform libraries to enhance system observability. Achieved over 75% unit test coverage and documented all APIs in Confluence.

✔ **Kreditplus - Kreditplus Mobile (Error Response Improvement)**
Contributed as a backend support engineer for the account and transaction service, integrating standardized error response payloads from the platform's shared library. Implemented automated error reporting for server-side failures (HTTP ≥ 500) and enhanced observability through platform-level request tracing integration. Adjusted and expanded unit tests to ensure reliability and maintain over 75% coverage. Authored comprehensive API documentation in Confluence.

✔ **Kreditplus - Allocation For Insurance**
Contributed to the development of services for the Allocation for Insurance product, including the integration of standardized error payloads from the platform's shared library into the service workflow. Implemented an automated mechanism for reporting server-side failures (HTTP ≥ 500) and strengthened system observability through platform-level tracing integration. Refined and expanded unit tests to maintain service stability with test coverage above 75%. Produced clear and comprehensive API documentation in Confluence.

QLola Cash Management

Mei 2023 - July 2025 | Microfrontend, Typescript, Next.js, Tailwind CSS, Microservice, Golang, RESTful API, gRPC, PostgreSQL, MongoDB, Redis, RabbitMQ, Protocol Buffers, Swagger, MinIO, Rundeck, Bitbucker, Bamboo, Openshift Container Platform, Fluent Bit, Kibana, Docker, Konga, Nexus Repository, Nx Repository

QLola Cash Management, developed by Bank Rakyat Indonesia, is a comprehensive solution that helps companies efficiently manage their cash flow. It offers features like payment processing, account monitoring, and financial reporting, helping businesses optimize liquidity and minimize financial risks.

✔ **QCash - Main Page**
Migrated the authentication system to a modern architecture, enhancing login security, session management, and access efficiency.

✔ **QCash - Mass Transfer**
Developed a mass transfer system supporting multiple payment methods, including Internal Fund Transfer (IFT), Real-Time Gross Settlement (RTGS), Clearing, and BI-Fast, to ensure seamless and efficient financial transactions.

✔ **QCash - International QCash**
Implemented an international transfer feature supporting Internal Fund Transfer (IFT), and mass transactions in multiple currencies, optimizing cross-border payment efficiency.

✔ **QCash - Multipayment (Pelindo)**
Added a multipayment feature specifically designed for Pelindo, enabling seamless and efficient payment processing tailored to the company's financial operations.

✔ **QCash - Payroll Transfer (GnuPG Encryption for Upload and Report Files)**
Implemented GnuPG encryption for payroll file uploads and reporting, ensuring secure data transmission and storage.

✔ **QCash - Payroll Transfer (External Fund Transfer)**
Developed an external payroll transfer system enabling seamless salary disbursements to employees across different banks.

✔ **QCash - Payroll Transfer (Revamp UI and Migrate Micro Front-End)**
Redesigned the payroll transfer user interface (UI) and migrated to a Micro Frontend (MFE) architecture to enhance user experience and system scalability.

✔ **QCash - Payroll Transfer (Bulk Upload & Report)**
Built a File Transfer Protocol (FTP)-based bulk payroll upload system with comprehensive reporting capabilities, streamlining payroll processing for enterprises.

✔ **QCash - Payroll Transfer (AES 128/256 Encryption for Upload and Report Files)**
Developed an AES 128/256 encrypted payroll file upload and reporting system, enhancing data security and compliance.

✔ **QCash - Payroll Transfer (Logging Migration and Code Enhancement)**
Contributed to the migration of the logging system from logrus to zap, improving performance and efficiency in log management. Worked on integrating the new logging system with Fluentbit and Kibana for seamless log monitoring and analysis. Additionally, assisted in refactoring the code to enhance readability, maintainability, and scalability.

✔ **QCash - Payroll Transfer (Native Query Language Migration)**
Collaborated in optimizing data handling by migrating from GORM to native SQL queries, resulting in improved performance and faster data processing. This transition helped achieve more efficient query execution, especially when managing large volumes of data, boosting overall system responsiveness.

RainCast: Rainfall Forecasting Using LSTM Deep Learning Model (Thesis)

2022 | Deep Learning, RNN, LSTM, Pandas, Numpy, Tensorflow, Web Socket, Time Series, Python, Django

Developed a rainfall forecasting system using Deep Learning with Long Short-Term Memory (LSTM) networks to analyze and predict rainfall patterns based on historical time series data. Implemented using Python, TensorFlow, Pandas, and NumPy, the model leverages RNN architectures for accurate forecasting. Integrated into a Django web application with Web Socket for real-time prediction interaction and hyperparameter tuning. Prediction logs are stored in a database for future evaluation and decision-making support.

SKILLS

Front-End Development

-  Microfrontend (Module Federation)
-  Typescript
-  Next.js
-  React.js (Zustand, React Query)
-  React Native (Expo)
-  Tailwind CSS
-  Storybook
-  CSS 3
-  Dart
-  Flutter (Provider, BLoC)

Back-End Development

-  Microservice (RESTful API, gRPC)
-  Golang (Gin, Gomux)
-  Node.js (Express.js)
-  Python (Django, Tensorflow)
-  Rust
-  PHP (Laravel)

Tools and Technologies

-  Nx Repository
-  Turborepo
-  Swagger
-  Protocol Buffers
-  Elasticsearch
-  RabbitMQ
-  Firebase
-  Redis
-  MongoDB
-  MySQL
-  PostgreSQL
-  SQL Server
-  Visual Studio Code
-  ChatGPT Prompter
-  Github Copilot
-  Git
-  Bash
-  Github
-  Figma
-  Postman
-  MinIO
-  Rundeck
-  Bitbucket
-  Bamboo
-  Jira
-  Confluence
-  OpenShift Container Platform
-  Amazon Web Services
-  Google Cloud
-  Kibana
-  Fluent Bit
-  Docker
-  Kong (Konga)
-  Nexus Repository
-  Jenkins
-  Grafana

Machine Learning & AI

-  Deep Learning (RNN, LSTM)
-  Time Series Forecasting

Languages

-  Indonesia (Native Speaker)
-  English (Working Proficiency)
